

HAYS FLUID CONTROLS RESPONDS TO RISING COMMODITY PRICES WITH AN ADVANCED VALVE DESIGN

Mesurflo® automatic flow control valves are now available with flow rates up to 9.00 GPM in the small brass body designs. Previously all 9.00 GPM applications required the use of the large brass body designs such as models 2520 and 2524. Now, nearly 90% of 9.00 GPM applications can utilize the small brass body valves, models 2510, 2514, 2516, 2519 and 2517. This is approximately a 50% reduction in brass for 9.0 GPM applications, resulting in substantial cost savings to you.
